

Through the brand “Enviocity”, we offer **an integrated solution for the sustainable city**, to considerably reduce the carbon impact of development and urban projects. Our teams provide tailored advice, identify low-carbon technologies “Made in France”, best suited for utilities - water, energy and environment- and provide installation services and overall project management.

TIME TO
CREATE

LOW-CARBON SOLUTIONS

DEDICATED TO SUSTAINABLE DEVELOPMENT PROJECTS

Our expertise

We are using the Carbon as a key variable input to structure upstream, the development of sustainable cities or sustainable projects and infrastructures.

- **Feasibility studies:**
 - dedicated **carbon counting tools** for infrastructures or enterprises,
 - **Climate Plan:** a major planning tool designed for cities,
- Identification of innovative and low carbon technologies solutions,
- **Impact on air quality,**
- Integrated Engineering, Civil Works supervision and onsite Installation.
- Maintenance, project monitoring indicators.

Integrated and Collaborative Engineering Solutions

Envirocity® identifies mature technologies with low carbon intensity used in wastewater treatment, the treatment of waste & recycling, green energy production... and that require lighter infrastructures, low maintenance, low energy and reduced natural resources.

- Treatment of wastewater by Bamboo,
- On-grid or off grid dedicated renewable energy solutions,
- Solar street lighting,
- Solar powered Intelligent waste Collectors,
- Compact underground collectors,
- Recycling: Ewaste and batteries, proximity composting units.

Our Added-value

Decentralized energy, water and waste processing

A pooling of skills for a comprehensive and sustainable offer package

Envirocity® involves and coordinates technical experts from each of the initiative eco-companies that have signed the Envirocity® charter of commitment.

Strong project management experience in complex international areas

Kenya, Ivory Coast, Papua New Guinea, Paraguay, Chile...

Personalized support for all types of players

- Public or Private planners, developers, investors,
- Local authorities,
- Rural Communities,
- Companies, Industries,
- Etc.
